

Neuropsychological Evaluations

CLINICAL & WELLNESS CENTER

NEW CBC SERVICE

Cognitive and Behavioral Consultants is now offering Neuropsychological Evaluations for individuals aged three through adulthood. There are many ways a neuropsychological assessment can be beneficial, including:

- Explaining why an individual is struggling to achieve his/her academic potential.
- Determining how an existing diagnosis, such as depression, anxiety, or ADHD, impacts learning and cognitive processing.
- Highlighting an individual's learning profile, which guides our formulation of comprehensive recommendations for home and school.
- Diagnostic clarification.
- Determining if a student qualifies for accommodations (i.e. extended time) in school and on standardized tests.
- Developing an appropriate plan to support a student in school.

Within our evaluations, we assess multiple aspects of cognition, namely:

- Language Processing
- Nonverbal Reasoning
- Processing Speed
- Memory
- Attention
- Executive Functioning
- Academics
- Social-emotional Functioning

Following the evaluation, we work closely with our patients to ensure that recommendations are able to be effectively implemented. Oftentimes, this involves collaboration with teachers, therapists, and physicians.

Additionally, CBC offers individual and group sessions supporting the development of executive functions, including: planning, scheduling, organizing, getting started, and persisting in the face of a challenge.

For more information about our assessment services, please contact Dr. Michelle Greenberg, Director of Clinical Intake Services, at (914)-385-1150, Option 1.
